## SUMMARY

Curious and self-motivated full-stack web developer with a passion for creating responsive and interactive UI/UX. Eager to create products that will make an impact. Dedicated to following industry standards and technological trends. Strengths in problem-solving, teamwork and curiosity.

## SKILLS

HTML5, CSS3, Javascript, Handlebars.js, Node.js, mySQL, MongoDB, Firebase, jQuery, Bootstrap, Bulma, Express.js, ReactJS

## PROJECTS

### FriendFinder

- This is a compatibility-based app – just like a dating app. This full-stack site will take in results from users' surveys, and then compare their answers with those from other users. The app will then display the name and picture of the user with the best overall match.
- Technologies used: Node and Express Servers
- <https://evening-hamlet-98451.herokuapp.com/> and <https://github.com/katrinity/FriendFinder>

### MongoDB\_Scraper

- This app scrapes articles from <https://sf.curbed.com/> using Mongoose and Cheerio.
- Technologies used: Node.js, Express.js, Handlebars.js, MongoDB, Mongoose
- <https://secure-fjord-47529.herokuapp.com/> and [https://github.com/katrinity/MongoDB\\_Scraper](https://github.com/katrinity/MongoDB_Scraper)

### GoogleBooks

- React-based Google Books Search app. Users can search for books via the Google Books API and render them here. The user has the option to "View" a book, bringing them to the book on Google Books, or "Save" a book, saving it to the Mongo database. Saved - Renders all books saved to the Mongo database. The user has an option to "View" the book, bringing them to the book on Google Books, or "Delete" a book, removing it from the Mongo database.
- Technologies used: React.js, Node.js, Express.js, MongoDB
- <https://secret-spire-62153.herokuapp.com/> and <https://github.com/katrinity/GoogleBooks>
