## SUMMARY

Curious and self-motivated full-stack web developer with a passion in creating responsive and interactive UI/UX. Eager to learn and improve coding skills in order to create products that will make an impact in the tech world. Dedicated to follow industry standards and technological trends.

## SKILLS

HTML5, CSS3, Javascript, Handlebars.js, Node.js, MySQL, MongoDB, Firebase, jQuery, Bootstrap, Bulma, Express.js, ReactJS

## PROJECTS

### FriendFinder

This is a compatibility-based app – just like a dating app. This full-stack site will take in results from users' surveys, and then compare their answers with those from other users. The app will then display the name and picture of the user with the best overall match. Technologies used: Node and Express Servers <https://evening-hamlet-98451.herokuapp.com/>

### MongoBD\_Scraper

This app scrapes articles from <https://sf.curbed.com/> using Mongoose and Cheerio. Technologies used: Node.js, Express.js, Handlebars.js, MongoDB, Mongoose <https://secure-fjord-47529.herokuapp.com/>

### GoogleBooks

React-based Google Books Search app. User can search for books via the Google Books API and render them here. User has the option to "View" a book, bringing them to the book on Google Books, or "Save" a book, saving it to the Mongo database. Saved - Renders all books saved to the Mongo database. User has an option to "View" the book, bringing them to the book on Google Books, or "Delete" a book, removing it from the Mongo database. Technologies used: React.js, Node.js, Express.js, MongoDB <https://secret-spire-62153.herokuapp.com/>
